

QTLC Hydrogen Working Group request form

Interested in becoming a QTLC Hydrogen Working Group member and joining other freight industry leaders, logistics providers, and warehouse managers in defining the hydrogen opportunity for end users? Hydrogen has tremendous potential to enable the freight sector to transition to a zero carbon future. The technology is well advanced but how we transition to adoption and use is the question.

What are the infrastructure requirements (fuelling etc.)? What are the economic drivers? What are the policy settings that will support hydrogen demand? Will incentives work and what are the optimal incentives needed to assist industry? Where does industry see the opportunity and barriers to entry? If these questions interest you then please apply, and we can work on them together.

Please complete the form and send via email to admin@qtlc.com.au
